SUMMARY

Accomplished a track record of building responsive, production-ready full-stack web applications, as measured by three end-to-end projects spanning frontend, backend, and database layers, by applying React.js, Node.js, Express.js, MongoDB, and modern JavaScript (ES6+) across component-based, API-driven, and secure authentication-backed architectures.

SKILLS

Languages: Java, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3

Frameworks & Libraries: React.js, Node.js, Express.js, Tailwind CSS, Vite, Recharts

Databases: MongoDB, SQL

Tools & Platforms: Git/GitHub, REST API Integration, JWT, Figma, Canva

Concepts: React Hooks, State Management, Component Lifecycle, SPA Architecture, RESTful API Design, Authentication & Authorization, Local Storage, Responsive Design

EXPERIENCE & TRAINING

Full-Stack Web Developer (Trainee), 100xdevschool

Jan 2026 - Jun 2026

- Accomplished a strong foundation in full-stack development, as measured by completing end-to-end application workflows across the MERN stack, by finishing an intensive 6-month training program covering software architecture and database design.
- Accomplished deeper technical proficiency in framework internals, as measured by improved understanding of runtime environments and asynchronous workflows, by studying the under-the-hood mechanics of modern JavaScript frameworks.
- Accomplished stronger production-level design skills, as measured by successful replication of industry-standard applications, by cloning real-world apps to analyse frontend-backend integration patterns.

PROJECTS

Admin Dashboard Application

React.js, Tailwind CSS, Recharts

[GitHub Link](#)

- Accomplished a fully responsive, multi-level admin dashboard SPA, as measured by seamless real-time data rendering and navigation across all sidebar menus, by building dynamic routing and state management with React.js and React Hooks (useState, useEffect).
- Accomplished real-time analytics visualization, as measured by clear bar and pie chart representations of dashboard data, by integrating the Recharts library into the analytics overview panel.
- Accomplished simplified navigation maintenance and consistent mobile-first, cross-browser rendering, as measured by menu updates requiring no code changes and reliable display across devices, by architecting a data-driven route configuration and applying Tailwind CSS utility classes.

E-Commerce Web Application

React.js, Vite, REST API

[GitHub Link](#)

- Accomplished a fast-loading, 3-page responsive e-commerce platform (Home, Product Listing, Cart), as measured by improved build and load performance, by developing the application with React.js and Vite.
- Accomplished dynamic, reliable product data rendering, as measured by proper handling of loading and error states, by integrating RESTful mock APIs with useState, useEffect.
- Accomplished a maintainable, persistent shopping experience, as measured by cart items remaining available across page refreshes with zero backend dependency, by implementing Local Storage alongside a reusable, component-based architecture.

Masters Forum (Masters Gang)

React.js, Node.js, Express.js, MongoDB, JWT, Nodemailer

[GitHub Link](#)

- Accomplished a secure MERN-based educational platform, as measured by enabling teachers to create private classrooms and share study materials, by building the application with React, Node.js, Express.js, and MongoDB.
- Accomplished secure classroom access, as measured by protection against unauthorized entry, by implementing JWT authentication, OTP-based classroom verification, and role-based authorization.
- Accomplished a scalable full-stack architecture with reliable classroom management, as measured by protected routing, functional post creation, and resource-sharing capabilities, by developing RESTful APIs and designing the system with React, Express, Mongoose, and MongoDB.

EDUCATION

Channabasaveshwara Institute of Technology, Gubbi, Karnataka

2022 - 2025

Bachelor of Technology in Mechanical Engineering, CGPA: 7.5 / 10
