SUMMARY

Full-stack developer with hands-on, production-ready experience across three end-to-end projects spanning frontend, backend, and database layers. Skilled in React.js, Node.js, Express.js, and MongoDB, with a practical focus on component-based architecture, RESTful API design, and secure authentication.

SKILLS

Languages: Java, JavaScript (ES6+), TypeScript, SQL, PostgreSQL, HTML5, CSS3

Frameworks & Libraries: React.js, Node.js, Express.js, Tailwind CSS, Vite, Recharts

Databases: MongoDB, SQL

Tools & Platforms: Git/GitHub, REST API Integration, JWT, Figma, Canva

Concepts: React Hooks, State Management, Component Lifecycle, SPA Architecture, RESTful API Design, Authentication & Authorization, Local Storage, Responsive Design

EXPERIENCE

Full-Stack Web Developer (Trainee), 100xdevschool

Jan 2026 - Jun 2026

- Completed an intensive 6-month full-stack training program, building end-to-end application workflows across the MERN stack while covering software architecture and database design.
- Studied the under-the-hood mechanics of modern JavaScript frameworks to build a stronger understanding of runtime environments and asynchronous workflows.
- Cloned industry-standard applications to analyze production-level design patterns and improve frontend-backend integration skills.

PROJECTS

Admin Dashboard Application

React.js, Tailwind CSS, Recharts

[GitHub Link](#)

- Built a fully responsive, multi-level admin dashboard SPA with dynamic routing and real-time data rendering, using React.js and React Hooks (useState, useEffect).
- Integrated the Recharts library to deliver real-time bar and pie chart visualizations in an analytics overview panel.
- Architected a data-driven route/menu configuration and applied Tailwind CSS utility classes, enabling menu updates without code changes and consistent mobile-first, cross-browser rendering.

Rapid-AI (SaaS Platform)

PostgreSQL, Express.js, React.js, Node.js, Clerk

[GitHub Link](#)

- Developed an AI-powered SaaS platform offering content generation and intelligent resume analysis.
- Integrated Clerk authentication with role-based access control.
- Designed scalable PostgreSQL-backend services for structured data management.
- Implemented subscription-based feature access and premium user management.

Masters Forum (Masters Gang)

React.js, Node.js, Express.js, MongoDB, JWT, Nodemailer

[GitHub Link](#)

- Built a secure MERN-based educational platform enabling teachers to create private classrooms and share study materials with students.
- Implemented JWT authentication, OTP-based classroom verification, and role-based authorization to secure classroom access.
- Developed RESTful APIs for classroom management, post creation, and resource sharing, using Express.js, Mongoose, and MongoDB within a scalable, protected-route architecture.

EDUCATION

Channabasaveshwara Institute of Technology, Gubbi, Karnataka

2022 - 2025

Bachelor of Technology in Mechanical Engineering, CGPA: 7.5 / 10
